1. (c) Teacher teaches students. Similarly, lawyer serves his client.
2. (b) Dress is prepared by tailor. Similarly, furniture is manufactured by carpenter.
3. (a) Bow and Arrow are complementary to each other. Similarly, Pistol and Bullet are complementary to each other.
4. (c) The second develops into the first. Seed germinates to give rise plant. Similarly, Bud develops into flower.
5. (c) The first is contained or served in the second. Tea is served in the cup. Similarly, soup is served in the bowl.
6. (b) B is sister of F. শ্রদ্ধাচিহ্ন
Therefore, B is sister-in-law of M.
7. (a) E is mother of C and D.
C is father of A and B.
Therefore, B is the granddaughter of E.
8. (c) A's son is the brother of C and D.
Therefore, C is the daughter of A.
Now, B is the uncle of C.

$$27 \times 3 \div 6 + 9 - 8 = ?$$

$$\Rightarrow ? = 27 \div 3 - 6 \times 9 + 8$$

$$\Rightarrow ? = 9 - 54 + 8$$

$$\Rightarrow ? = 17 - 54 = -37$$

11. (a) $baf \div bf \times d$

$$\Rightarrow 105 \div 15 \times 3$$

$$\Rightarrow 7 \times 3 = 21 \Rightarrow cb$$

12. (b) $18 \times 2 = 36$ and
 $36 - 6 = 30$

Therefore,
 $36 \times 2 = 72$ and $72 - 6 = 66$

13. (b) $68 = (4)^3 + 4$
and $130 = (5)^3 + 5$
 $350 = (7)^3 + 7$

Therefore, $? = (6)^3 + 6$
 $= 216 + 6 = \boxed{222}$

14. (b) $\sqrt{169} = 13$

Therefore,

$$\sqrt{289} = \boxed{17}$$

27. (b) The concept of zero as a number and not merely a symbol for separation is attributed to India, where, by the 9th century AD, practical calculations were carried out using zero, which was treated like any other number, even in case of division. The credit for inventing ‘zero (0)’ goes to Indian mathematicians and the number zero first appears in a book about ‘arithmetic’ written by an Indian mathematician ‘Brahmagupta’. Zero signifies ‘nothing’ and the current definition calls it an ‘additive identity’. The Indian mathematicians Bhaskara, Mahavira and Brahmagupta worked on this new number and they tried to explain its properties. It wasn't that somebody suddenly came up with the idea of the zero and the mathematicians throughout the world accepted it. Around 500 AD, Aryabhata, an Indian mathematician, devised a numbers system and the symbol he used for the number zero was also the number used to represent an unknown element (x).

28. (a) The English word “caste” derives from the Spanish and Portuguese casta, which the Oxford English Dictionary quotes John Minsheu's Spanish dictionary (1599) to mean, “race, lineage, or breed.” When the Spanish colonized the New World, they used the word to mean a “clan or lineage.” However, it was the Portuguese who employed casta in the primary modern sense when they applied it to the many inmarrying hereditary Hindu social groups they encountered upon their arrival in India in 1498. The use of the spelling “caste,” with this latter meaning, is first attested to in English in 1613.

31. (c) An open market operation (also known as OMO) is an activity by a central bank to buy or sell government bonds on the open market. A central bank uses them as the primary means of implementing monetary policy. The usual aim of open market operations is to control the short term interest rate and the supply of base money in an economy, and thus indirectly control the total money supply. This involves meeting the demand of base money at the target interest rate by buying and selling government securities, or other financial instruments. Monetary targets, such as inflation, interest rates, or exchange rates, are used to guide this implementation. ଆଚିଭିଏର୍ସ
32. (d) Charaka was one of the principal contributors to the ancient art and science of Ayurveda, a system of medicine and lifestyle developed in Ancient India. He is referred to as the Father of Medicine. The life and times of Charaka are not known with certainty. Some Indian scholars have stated that Charaka of Charaka Samhita existed before Panini, the grammarian, who is said to have lived before the sixth century B.C. Another school argues that Patanjali wrote a commentary on the medical work of Charaka. They say that if Patanjali lived around 175 B.C., Charaka must have lived some time before him. Another source about the identity of Charaka and his times is provided by the French orientalist Sylvan Levi. He discovered in the Chinese translation of the Buddhist Tripitaka, a person named Charaka who was a court physician to the Indo-Scythian king Kanishka, who in all probability reigned in the second century A.D. From the above discussion, it would seem that Charaka may have lived between the second century B.C. to the second century A.D. ଆଚିଭିଏର୍ସ

On cubing both sides.

$$a^3 + \frac{1}{a^3} + 3a \cdot \frac{1}{a} \left(a + \frac{1}{a} \right) = 3\sqrt{3}$$

$$\Rightarrow a^3 + \frac{1}{a^3} + 3\sqrt{3} = 3\sqrt{3}$$

$$\Rightarrow a^3 + \frac{1}{a^3} = 0 \quad \dots(i)$$

$$\Rightarrow a^6 - \frac{1}{a^6} + 2$$

$$= \left(a^3 \right)^2 - \left(\frac{1}{a^3} \right)^2 + 2$$
